Google Cloud H2S

AI Builder Cup

Build in JAPAC.
Build for the world.

Team Details

a. Team name: testofschool
b. Team leader name: Jung Min Kang
c. Problem Statement: People who pay per generation for AI video only learn a clip is unusable after they have paid for it.

Brief about the idea

You pay first. You find out later.

“you still burn credits on the failed attempt”

Trustpilot, Runway review

“a lo-res preview render before having to spend actual credits”

Adobe Community

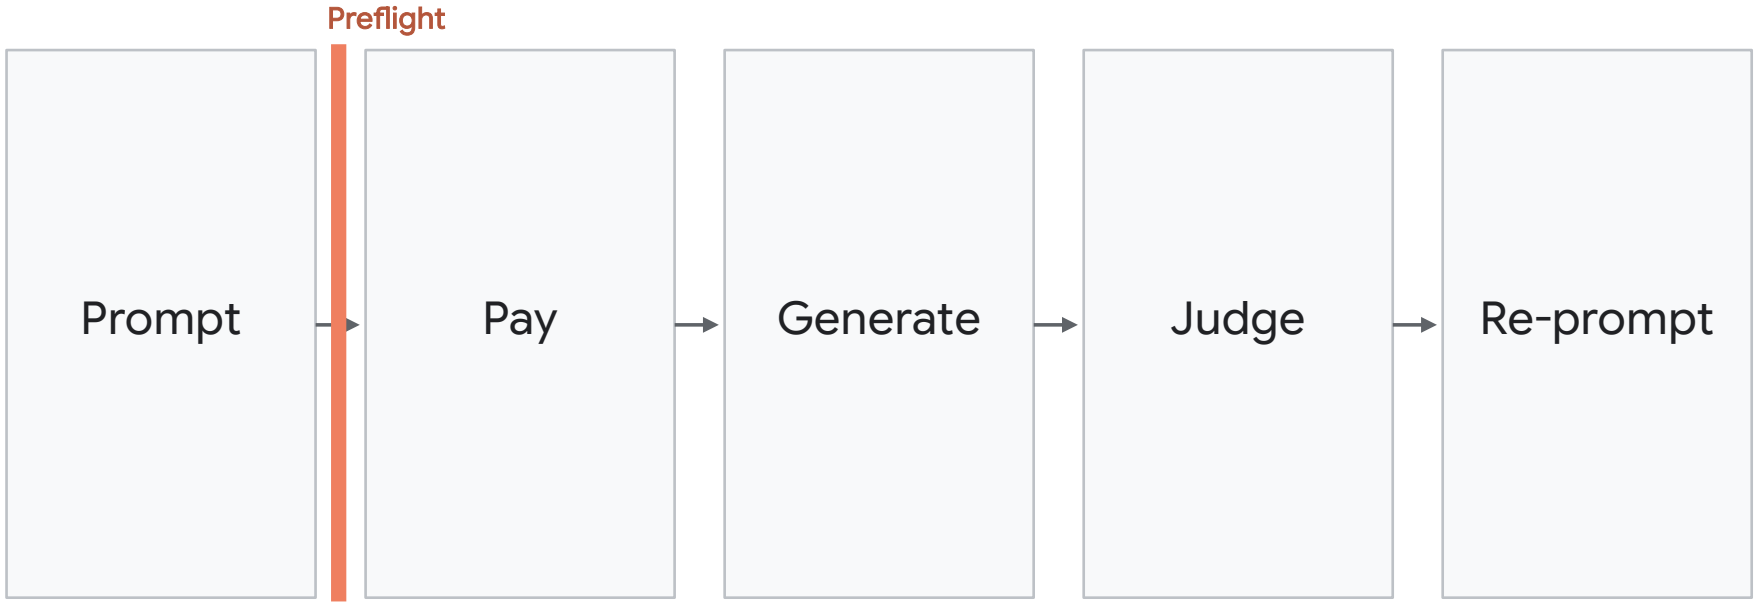

2024 GenAI-Bench: 21% of 1,911 human votes rejected both videos. Conceptual photograph.

Opportunities

A check belongs before pay.

Refunds cover errors, not unusable finished clips. Runway 1.1/5 (340 reviews). Adobe preview request: 219 votes.

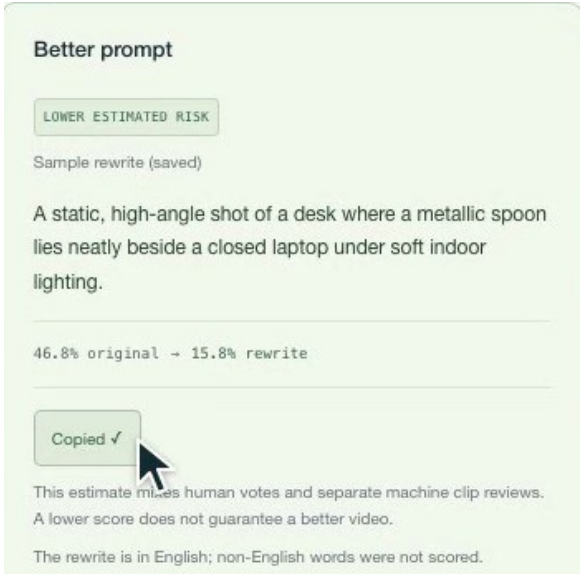

Sources: Runway credit-refund policy, Trustpilot, Adobe Community preview request.

List of features offered by the solution

Three checks before you spend.

Risk from 1,911 human votes
Historical, uncalibrated

Gemini rewrite, kept only if risk drops

A still before a $3.20 video
Motion untested

Sources: demo/frames, saved spoon/laptop still, Google video pricing page.

Process flow diagram or Use-case diagram

Paste. Check. Rewrite. Look.

1 Paste

a spoon and a laptop

2 Risk + why

Risk

46.8%

Mixed heuristic risk estimate

Text neighbours “a spoon and a laptop” and “a tv and a laptop” support an estimated risk score of 46.8%. The

3 Better prompt

A static, high-angle shot of a desk where a metallic spoon lies neatly beside a closed laptop under soft indoor lighting.

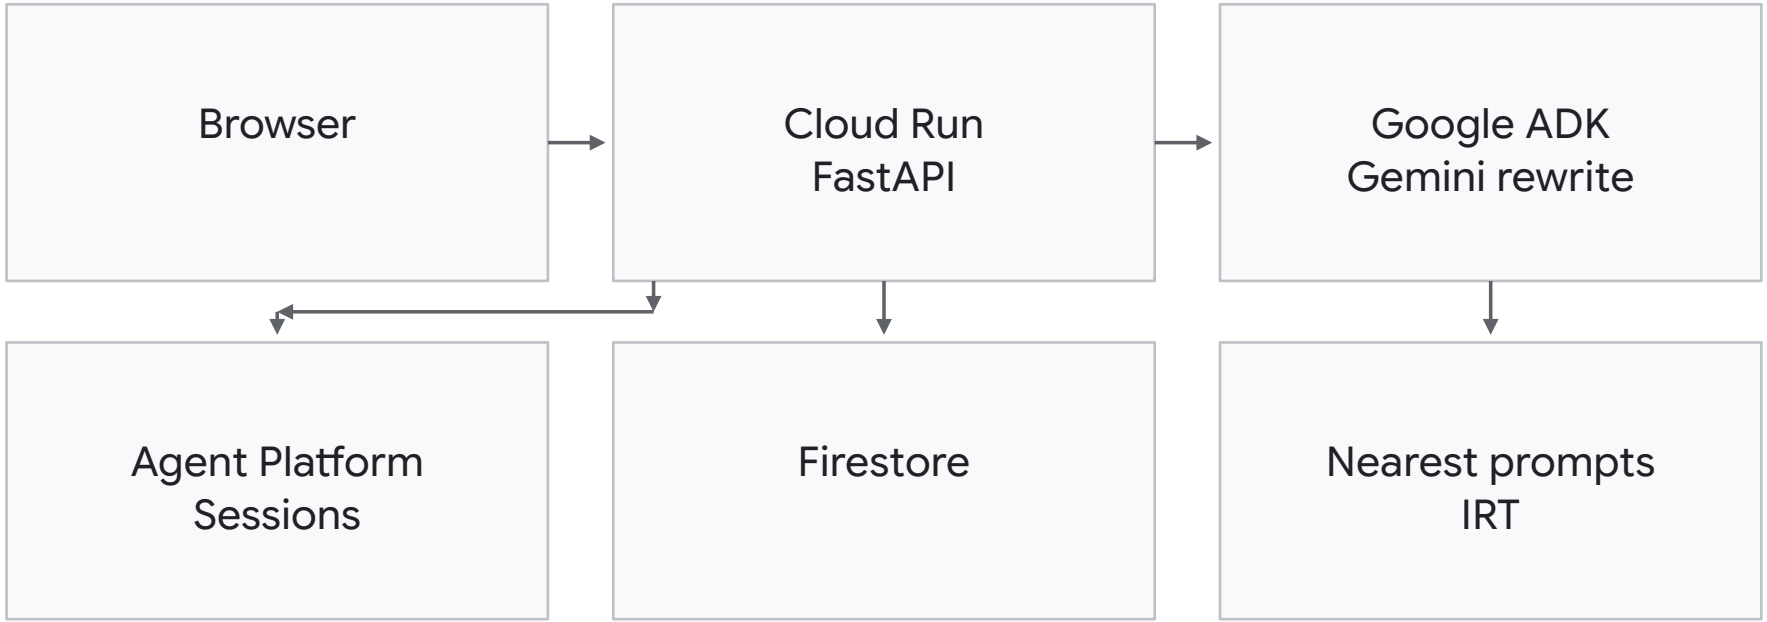

4 Still / clip review

Source: demo/frames and saved spoon/laptop still.

Architecture diagram of the proposed solution

One request, a traceable check.

Source: deployed application architecture and README service inventory.

Technologies to be used in the solution

All on Google Cloud.

Cloud Run	Firestore	Gemini 3.5 Flash (Vertex AI)	Google ADK	Agent Platform Sessions	Gemini image + video understanding
↓	↓	↓	↓	↓	↓
Hosts	**Stores**	**Rewrites**	**Orchestrates**	**Remembers**	**Stills/reviews**

Snapshots of the prototype

See the estimate before the bill.

Original prompt

Rewritten prompt

46.8%

15.8%

Uncalibrated prompt estimates. Scene changed. Saved stills cannot establish video improvement or judge motion.

Sources: saved original and rewritten spoon/laptop outputs.

Prototype Performance report/Benchmarking

Measured, with the limits shown.

0.67

held-out historical AUC

8/20

valid images, best probe
60 calls across probes

0 model calls

$0.00

per saved-image replay

Risk uncalibrated. Clip accuracy unmeasured.

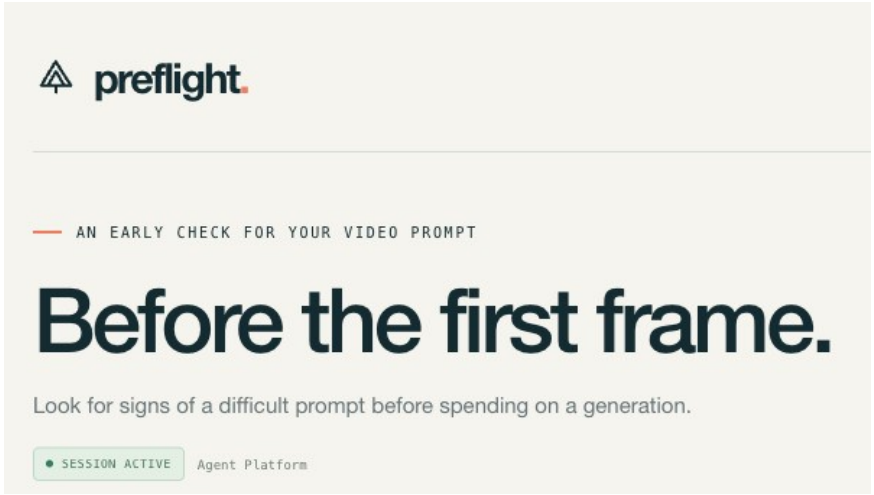

Sources: held-out evaluation, live-image probes, saved-image cache receipts.

Additional Details/Future Development (if any)

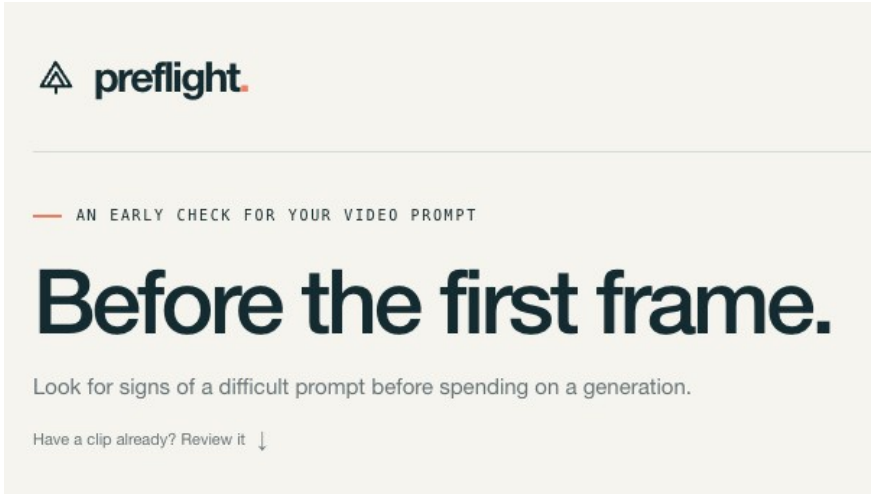

Felix builds. Sidhant: 10 QA points, 6 fixes.

F IRT preprints, 2.5 years	S **shipped** Objects 30 → 18. Colours 23 → 7.

Earlier interface

After teammate QA

Next: live stills, tabs, non-English.

Sources: teammate QA, first-viewport audit, archival header captures.

Point–Reason–Example–Point

Check before you pay.

Generators bill attempts. Refunds skip unusable clips.

Uncalibrated spoon/laptop estimate: 46.8% → 15.8%, saved still before $3.20 video.

Preflight: check before you pay.

Sources: Runway refund policy, saved spoon/laptop example; conceptual photograph.
